

ABC Data 2004/5

Total Resources Consumed By Activity/Incident - Sorted by Magnitude

Notes on some specific codes are shown in italics.

Note that the ABC model allocates the *whole* cost of the MPS to the list of activities set out below. Costs shown therefore not only include the cost of time and resources directly used on an activity (eg cars, IT), but also include an element for the costs of support departments (HR, Finance, etc) and other overheads too. Cost figures should only therefore be considered with this point in mind.
